

- Seems okay with what we want to do
- 3D model stuff
 - Definitely has access to stuff
 - Might be able to give us a dummy revit project for development
- Point-cloud processing might be a good way to deal with rendering new models
- Rcs files
 - Autodesk standard point-cloud files
 - Might have some information about what is an actual component put on top of them
 -
- Navisworks can be used to view Revit stuff
- Revit has some information - and also for non point cloud there are definitely separated components
- Other interested people
 - Ted - in John's office
 - Someone in Holland - Software Engineer working on similar things
- Seems happy with our MVP
- Backwashes with filters are a thing
- 3D model
 - We'll be able to get some revit files to mess around with
 - As well as point clouds to see how we can interface with them
 - .rvt files
